

# Creating a Data Collection Form

## Creating a new service

A new service can be created by clicking the "Create New Service" button located above the service list search box

The screenshot shows a web interface for managing services. At the top, there is a section titled "Service Search List". Below this title is a button labeled "Create New Service", which is highlighted by an orange arrow. Below the button is a search input field with the placeholder text "Name" and a blue dropdown arrow icon. Below the search field is a pagination bar showing "Page 1 of 1" with left and right navigation arrows. Below the pagination bar is a list of services. The first service is "Bug Report Form" with the status "Enabled". The second service is "Developer Schedule Testing" with the status "Enabled".

Newly created services will not exist until saved after initial configuration. This means that some functionality that needs an id number such as creating service rates will not be available until the user click the "Save" button to save a newly created service.

### Service Detail Editor

The screenshot shows the "Service Detail Editor" interface. At the top, there is a section titled "Creating New Record". Below this title is a form with the following fields:

- Identifiers**
  - Name**: A text input field with the placeholder text "Name".
  - Type**: A dropdown menu with the selected value "Scheduled" and a blue dropdown arrow icon.
  - Parent Group**: A text input field with the placeholder text "Developer Testing" and a magnifying glass icon.

# Identifiers

## Service Detail Editor

**Record ID**  
57

**Identifiers**  
**Name**  
Developer Schedule Testing  
**Type**  
Scheduled  
**Parent Group**  
Developer Testing

- **Record ID** - The system ID number identifying the service
- **Name** - The display name of the service in question.
- **Type** - The type of the service. Defaults to "Scheduled"
- **Parent Group** - The group to which this service belongs. Defaults to the currently active group but may be changed to any group that the creating user is listed as a manager for

# Visuals

**Visuals**  
**Color**  
#f2a464  
**Display Weight (Higher # = Displayed Higher)**  
0

- **Color** - The color of the button to access the service as it appears in the group services list. This field will accept and valid CSS color in string format. Ex:

- **Display Weight** - How high in the list a service will be displayed. Higher values will display first. Ex: 10 will appear after 50
- **Display Path** - For facilities with large numbers of instruments / services it can be helpful to have some additional level of organization. The display path setting allows managers to organize services into folder style nested groupings. The convention follow standard unix pathing conventions. Ex: "/Microscopes/" will display the given service under an

expandable section with all other services that have the same configuration.

## Contact Information

**Contact Info**  
**Location**  
  
**Contact Email**  

All Events

Add Email

- **Location** - The location the service is located at. This field is optional and will display after the service name on the list of services
- **Contact Email** - The list of email addresses that should be send a notification message. The contact email list can be configured to send emails to any number of addresses. Generally this will be the email of the person or persons responsible for managing the instrument. Email contacts can be configured to receive emails on the following events:
  - **All Events** - Send a notification for form creation, deletion, and update actions
  - **Only Create** - Send a notification on form creation
  - **Only Update** - Send a notification on form update
  - **Only Delete** - Send a notification on form deletion
- **Note:** The contact email configuration does NOT override the general "Notification Verbosity" setting for the service. If a service is configured to suppress all notification messages then no emails will be sent regardless of the contact email configuration. Also note that Line Item orders only generate "Create" notifications.

## General Config

**General Config**  

Enabled

Notification Verbosity

Manager Only

Yes

All Actions

No

- **Enabled** - Whether this services is actively in use
  - Yes - Active
  - No - Inactive
  - Archived - Inactive and hidden from search list. (Used for removing services from general use and decluttering un-used service records
- **Notification Verbosity** - When to send notification emails for actions that occur on the service
  - No Messages - No notifications sent

- On Create - Only send order creation notifications
- On Delete Only - Only send event deletion notifications (Delete not applicable for Line Item Orders)
- On Create/Delete - Only order notification when an event is created or deleted (Delete not applicable for Line Item Orders)
- All Messages - Send notification for all event creation, update, and delete actions (Delete and Update not applicable for Line Item Orders)

## Tags

Tags

Tag strings used by the system for categorization and certain actions. No special tags are defined for services at this time.

## Form Configuration Manager

Custom data collection forms can be configured to collect any desired data including digital signatures from submitters.
