Create a Black Box Sample Processing Order

The Black Box Sample processing system uses an order wizard that will guide the user through the ordering process.

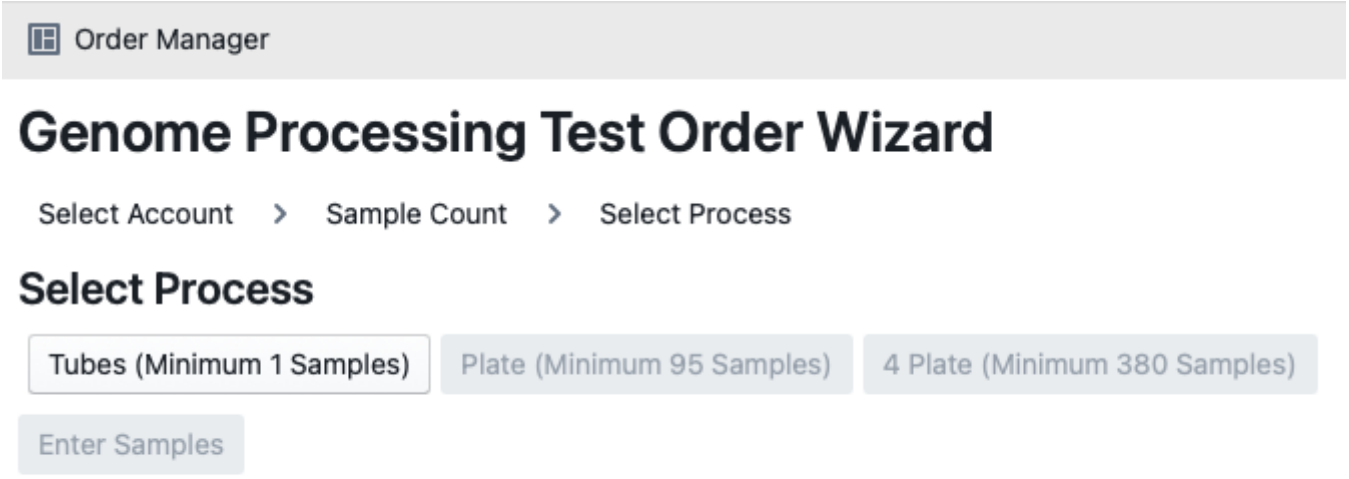

1. Select an account

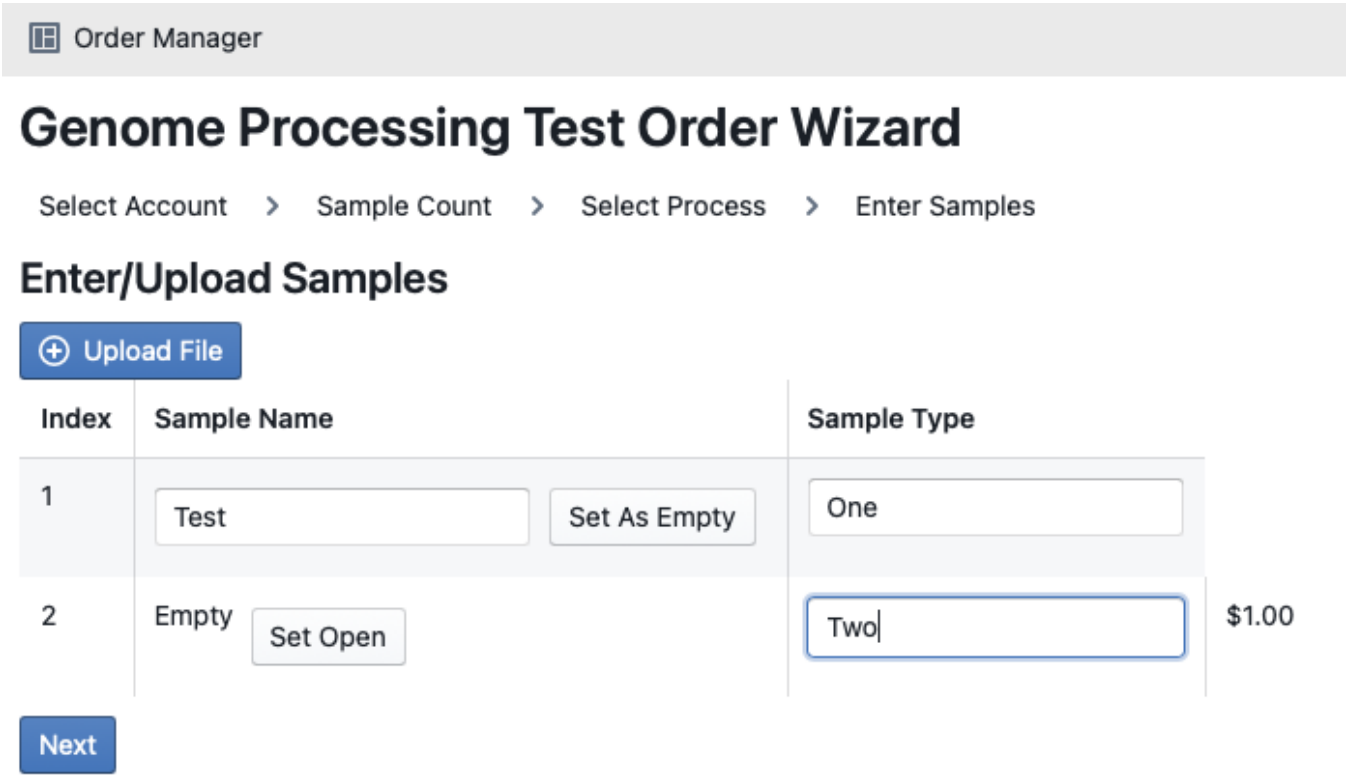

2. Enter the number of samples to be submitted (Note: This can affect what processes can be selected on the next step)

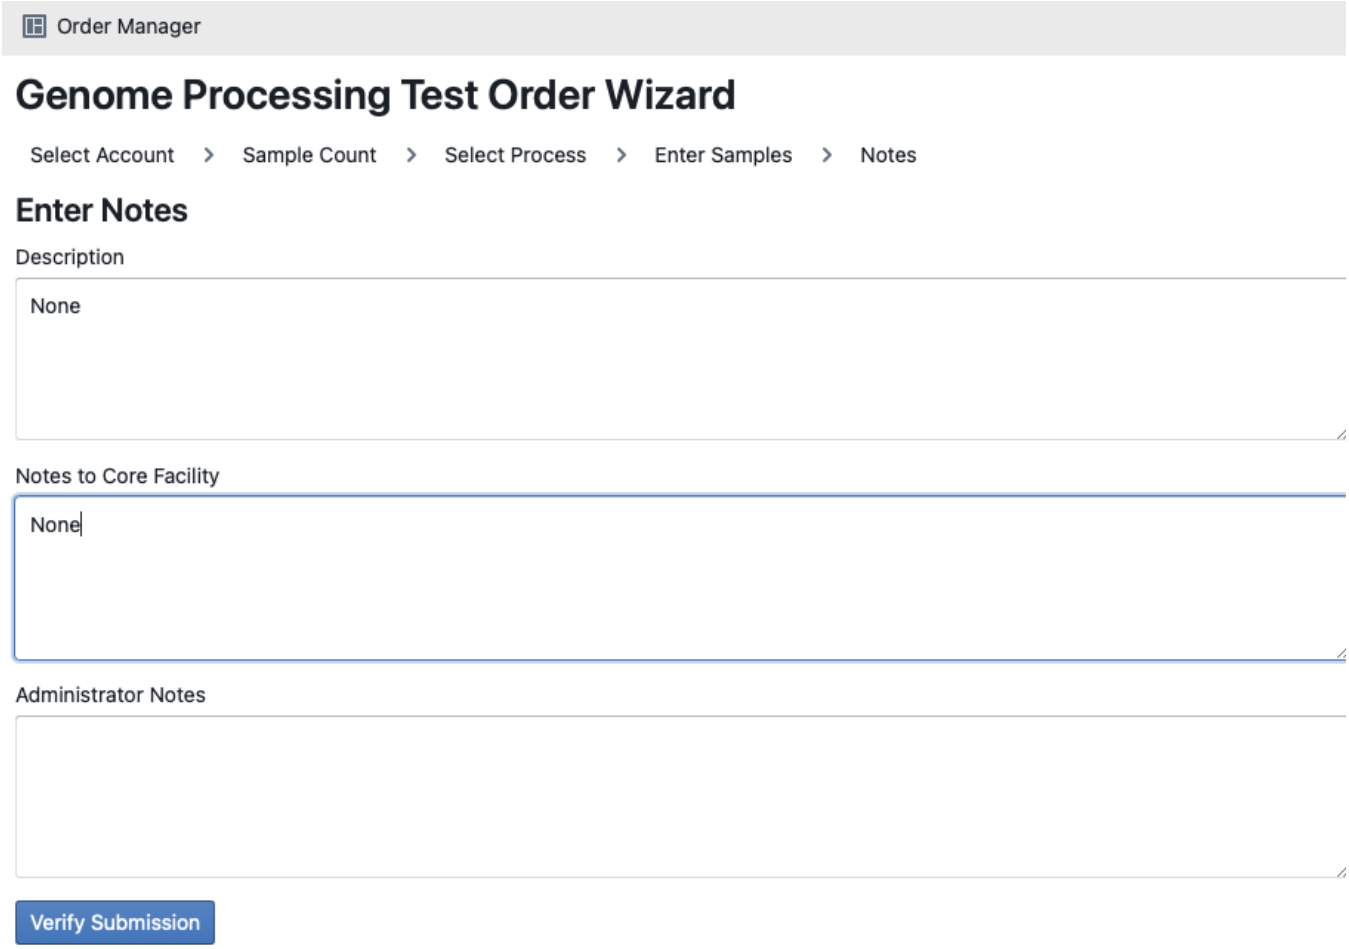

3. Select from the available processes that can be performed

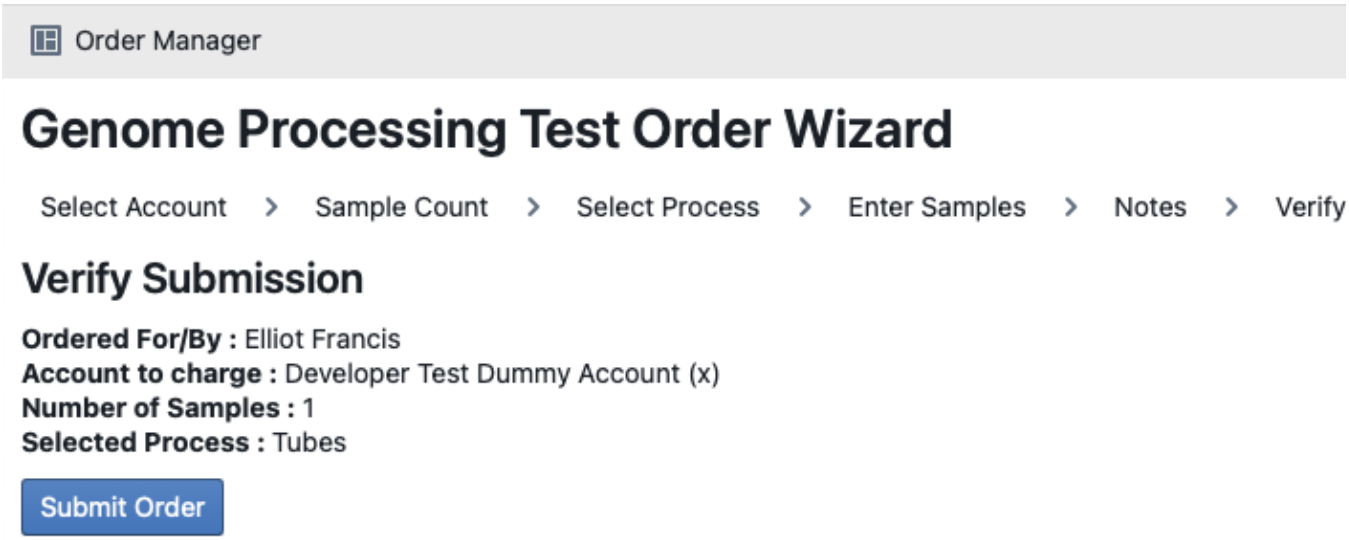

4. Enter the sample information

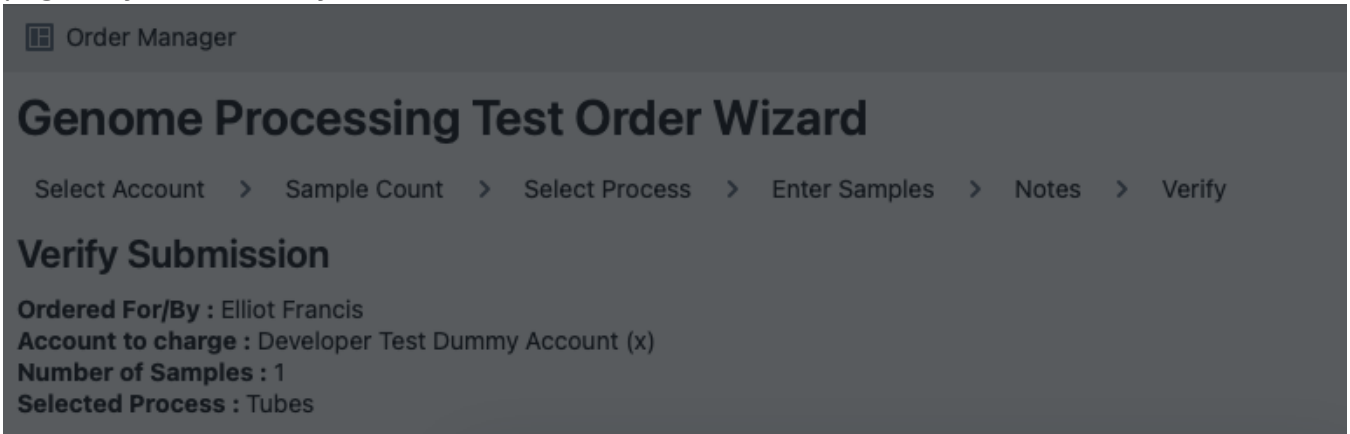

5. Enter any additional order details or instructions

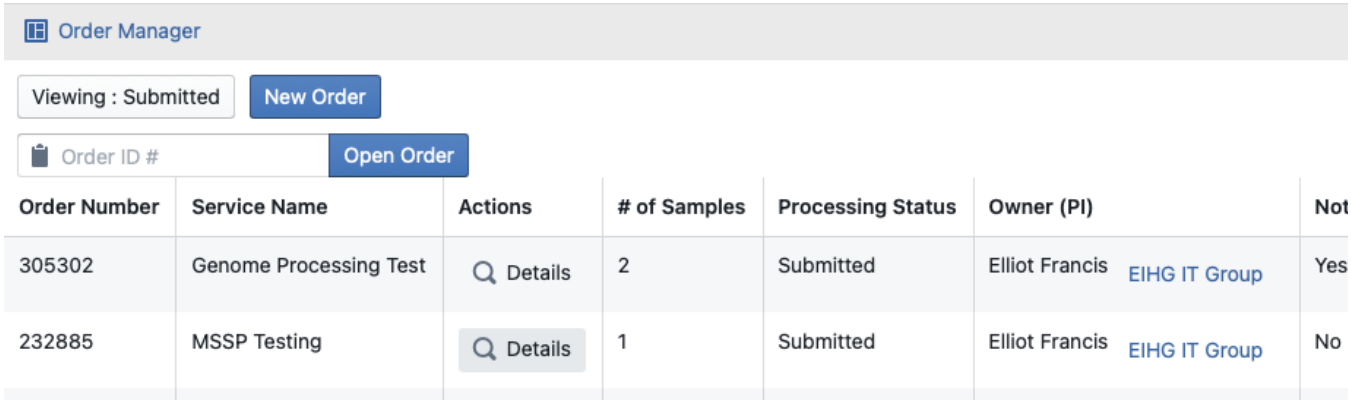

6. Review the submission data and click the submit button

7. The system will then display your order number and send you to the "Order Manager" page so you can view your submitted orders and their status.
